EDUCATION

University of Illinois at Chicago, Chicago, IL
Bachelor of Science, Mechanical Engineering 4.00 GPA

May 2022

WORK EXPERIENCE

SOFTWARE ENGINEER II - *DICK'S SPORTING GOODS*

April 2025 – Present

- Developed a full-stack Workday Extend Career Development Plans application using JSON-defined UI components and JavaScript business logic, enabling employees to create, track, and manage personalized growth plans directly within Workday.
- Designed and maintained integrations between Workday and external vendors such as BSwift using REST/SOAP APIs and Workday Query Language (WQL) to securely transfer employee data and automate business processes.
- Built and maintained data pipelines leveraging Fivetran, Databricks, and SQL transformations to improve accessibility of Workday data across the organization, enabling broader reporting and analytics capabilities.
- Built an AI-powered internal search assistant during a 48-hour Cursor hackathon using Jira and Confluence data to help employees identify subject matter experts, projected to save ~\$1M annually in productivity.

SOFTWARE INTEGRATION CONSULTANT - *INTECROWD*

August 2023 – April 2025

- Developed and maintained 50+ integrations using Workday Studio, Orchestrations, Connectors, EIBs, RaaS, and REST/SOAP APIs, automating data exchange between Workday and external systems for 20+ clients.
- Developed full-stack Workday Extend applications using App Builder and Orchestrate, leveraging GitLab for version control and IntelliJ for development and debugging.
- Configured authentication, security, and SSO integrations to enable secure communication between Workday and third-party applications.
- Managed technical delivery and issue resolution for 10+ concurrent clients, troubleshooting integrations and collaborating with stakeholders to deliver solutions.

MECHANICAL PROJECT ENGINEER - *PROCESSING TECHNOLOGIES INTERNATIONAL*

May 2022 – May 2023

- Automated engineering workflows using VBA macros to improve team efficiency and designed custom mechanical components using SolidWorks and AutoCAD.

PROJECTS

SORTING VISUALIZER - [HTTPS://ANTHONYGULYK.GITHUB.IO/SORTING-VISUALIZER/](https://anthonygulyk.github.io/sorting-visualizer/)

- Developed an interactive sorting algorithm visualizer using React and TypeScript to demonstrate common sorting algorithms and algorithm efficiency.
- Implemented Bubble Sort, Selection Sort, Insertion Sort, Merge Sort, and Quick Sort with animated step-by-step execution.
- Designed responsive UI components and CSS animations to visualize algorithm operations in real time.

SUSTAINABLE MONITOR FOR AIR NOZZLES - [HTTPS://TINYURL.COM/UIC2022](https://tinyurl.com/UIC2022)

- Designed an industrial monitoring system for air atomizing nozzles to detect equipment wear.
- Developed a detection methodology using pressure, temperature, and flow-rate data to identify nozzle degradation and recommend replacement timing, estimating \$300/year in energy savings per worn nozzle.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL, VBA | Frameworks: React | APIs: REST, SOAP | Platforms: Workday Extend, Workday Studio, Databricks, Fivetran | Tools: Git, GitLab, IntelliJ, Cursor, Jira
